Program Student Learning Outcomes

College: Architecture
Program: Environmental Design, BS

Upon completion of the Environmental Design program, students should demonstrate:

- Professional skills working as part of an interdisciplinary team to:
  1. Identify and evaluate conditions of the built environment through research, fieldwork, and documentation.
  2. Formulate and present valuable recommendations for issues related to community development and the built environment.

- An understanding of the various professional and institutional roles and processes that shape the built environment.

- Understanding of historic preservation planning concepts and techniques:
  1. Identify, research, and document historic structures through projects and assignments.
  2. Understand tax credits and incentives for rehabilitation of historic structures through projects.
