Program Student Learning Outcomes

College: Architecture
Program: Planning, Design and Construction, PhD

Graduates of the PhD program should be able to demonstrate:

- Advanced Knowledge: Students in the Ph.D. program will acquire and demonstrate advanced substantive and scholarly knowledge of both the history and theory of the fields of urban planning and design, architecture and construction management as well as pertinent research methods used in these academic disciplines.

- Professional Development: Students progressing through the Ph.D. program will demonstrate high academic standards and engage in research and creative activity visible to the discipline to improve their post-graduate employment prospects.

- Placement of Graduates: Students completing the Ph.D. degree in Planning Design and Construction will be competitive for appropriate positions at post-secondary educational institutions and/or government, business, and non-profit organizations.
