Program Student Learning Outcomes

College: Arts & Science
Program: Psychology, BA

Upon completion of the B.A. in Psychology, students should be able to:

- Demonstrate a breadth of knowledge concerning the theories, approaches, and findings of the primary fields of psychology and will exhibit basic analytic and problem solving skills appropriate to the field of psychology

- Pursue, evaluate, and propose a solution to a psychological problem (either basic or applied in orientation) using a combination of psychological theory, critical thinking, and the scientific method.

- Demonstrate the following skills:
  
  a) The ability to apply knowledge from their major courses to new problems in human cognition or behavior;
  
  b) The ability to understand, interpret, and evaluate critically basic research findings in psychology;
  
  c) The ability to communicate effectively to multiple audiences about the nature, findings, impacts, and applications of psychological science.
