Job Overview

Internships provide opportunities to learn and apply principles at both field and office settings, through a combination of team and individual project assignments. Devon offers office internships that depend on the candidates experience and the availability of projects. Geology/Geophysical internships allow students to apply the latest principles of geology and geophysics to the exploration and exploitation of hydrocarbons in North America.

Major Responsibilities

Interns will be assigned to both a Mentor and one of Devon’s Exploration or Exploitation divisions. Projects may include assisting Geologists or Geophysicists in preparing evaluations of prospective oil and gas trends, identifying new drilling prospects or working within existing fields.

Opportunities

You will receive diversified learning opportunities through on-the-job assignments, utilizing the technical skills that you have acquired in college. This internship will assist you in developing technically and professionally.

Devon’s Intern Recruiting Philosophy

Devon utilizes internship programs as a tool for staffing full-time positions. An internship allows the company to more accurately assess your knowledge, skills and abilities and for you to fully evaluate the work experience at Devon.
