

About the Division of Construction Science

Welcome to the University of Oklahoma's Haskell & Irene Lemon Construction Science Division. We are pleased that you are considering joining our program. The construction industry is challenging and rapidly evolving. These changes have resulted in increased responsibilities and obligations for the constructor. Developing, organizing and managing a successful team of the various design and building disciplines requires both technical and soft skills. As such, one of our primary goals is to provide students with the tools to be leaders in this rapidly changing construction industry.

The Haskell & Irene Lemon Construction Science Division is housed in the Christopher C. Gibbs College of Architecture. Being in the College of Architecture provides our program unique opportunities to collaborate with other major disciplines involved in the design and construction process. We are one of only a few colleges in the nation that house Architecture, Construction Science, Interior Design, Landscape Architecture and Regional & City Planning disciplines. Having these five major disciplines along with exceptional industry support creates a unique environment to educate students. We are extremely proud of our program and the fact that we provide our students with a relevant and applied educational experience.

Professional experience, is an important part of our program and it positively impacts our students.

- All graduates from our program complete at least one internship
 - About half go to work full time for the same companies they intern with
- In 2024, all of our graduates had job offers at graduation.
 - The average starting salary was over \$76,000

As you narrow your search for a program that will meet your educational goals and provide you with a challenging career, feel free to [contact us](#) and visit the College of Architecture.
